

SALES MEETING DECK

# Kiefer Built Operations Platform vs Buildertrend

A Kiefer-owned path to replacing third-party construction software while keeping the transition familiar for employees, managers, clients, and trade partners.

GOAL

**Own**  
the platform

GOAL

**Replace**  
Buildertrend  
dependency

GOAL

**Improve**  
Kiefer workflows

THE RIGHT FRAMING

# Do not pitch this as Buildertrend but cheaper.

The stronger pitch is ownership: Kiefer Built controls the client experience, the workflow, the reporting, and the product roadmap.

PILLAR 1

## Kiefer-owned

Clients and employees see Kiefer Built, not a third-party software brand.

PILLAR 2

## Familiar

Navigation mirrors common construction modules so the switch feels natural.

PILLAR 3

## Custom

Reports and finance tools match Kiefer's actual decisions.

**Buildertrend is mature. The Kiefer platform wins when Kiefer wants the software to feel like part of its company instead of a rented operating system.**

# A practical replacement path, not a clone race.

| Workflow          | Kiefer Platform                  | Buildertrend              | Position               |
|-------------------|----------------------------------|---------------------------|------------------------|
| Ownership         | Kiefer-branded and controlled    | Third-party SaaS brand    | Kiefer advantage       |
| Maturity          | Strong custom foundation         | Broader hardened SaaS     | Buildertrend today     |
| Client experience | Kiefer portal and website intake | Mature customer portal    | Kiefer brand advantage |
| Financial control | Kiefer-specific finance checks   | Broad financial modules   | Depends on workflow    |
| Roadmap           | Changed around Kiefer needs      | Vendor-controlled roadmap | Kiefer advantage       |
| Cost story        | Owned asset after buildout       | Custom quote subscription | Strategic decision     |

BUILDERTREND IS STRONG

# Mature advantages we should acknowledge.

- Established mobile app workflows.
- Payments, takeoff, and deeper estimating maturity.
- Accounting integrations and SaaS support infrastructure.
- Years of edge-case hardening across permissions, mobile behavior, and field usage.

This honesty makes the pitch stronger. We can show exactly what is built, what is next, and where Kiefer gains control.

# Where Kiefer is already differentiated.

01

## Website feeds CRM

Quote requests save into admin leads, reducing lost prospects.

02

## Kiefer portal

Clients stay inside Kiefer Built instead of another software brand.

03

## Finance tools

Accounting checks are packaged around Kiefer's daily review workflow.

04

## Roadmap control

Fields, reports, PDFs, and workflows can change as Kiefer changes.

POSITIONING

## Premium and controlled

The product makes Kiefer look organized, modern, and operationally serious.

# Core workflows are already in place

This is the slide to use when someone asks, "But does it actually cover what Buildertrend does?"

| Workflow  | Kiefer Platform                               | Buildertrend               | Position         |
|-----------|-----------------------------------------------|----------------------------|------------------|
| Sales     | Leads, quote intake, proposals                | Lead management, proposals | Comparable core  |
| Jobs      | Project hub, tasks, schedule                  | Jobs, tasks, schedule      | Built            |
| Field     | Daily logs, photos, files, RFIs               | Daily logs, docs, RFIs     | Built            |
| Decisions | Selections, change orders, approvals          | Selections, change orders  | Built            |
| Financial | Invoices, bills, POs, reports, finance tools  | Financial management       | Kiefer-tailored  |
| Client    | Authenticated portal and project view         | Customer portal            | Kiefer-branded   |
| Vendor    | Directory, assignments, workboard, submittals | Sub portal                 | Built foundation |

# The portal should feel like Kiefer Built, not rented software.

## CLIENT PORTAL

### Owner confidence

Authenticated project access with needs-attention summary, approvals, photos, files, field reports, invoices, warranty, and punch-list visibility.

## VENDOR PORTAL

### Trade coordination

Assignments, shared docs, RFIs, responses, submittals, review statuses, and manager comments in one Kiefer-managed workboard.

## TRANSITION

### Familiar routes

Navigation mirrors common Buildertrend categories while replacing the outside brand with Kiefer ownership.

**The strategic difference: clients and trade partners interact with Kiefer's process, Kiefer's language, and Kiefer's brand.**

MANAGEMENT MEETING VALUE

# Finance tools should answer daily contractor questions.

Instead of generic calculators, the tools are branded as Kiefer Built planning checks and tied to project financial review.

BUILT

## Cash flow

Forecast job inflows and outflows.

BUILT

## Margin risk

Spot cost exposure and variance.

BUILT

## Retainage

Plan draw timing and holdback.

BUILT

## NPV / IRR

Evaluate project decision quality.

DIFFERENTIATOR

## Custom reports can be changed

Kiefer can decide what the weekly finance dashboard should say.

# Honest gaps before calling it a full replacement.

- |    |                                                    |                                                                                      |
|----|----------------------------------------------------|--------------------------------------------------------------------------------------|
| 01 | <b>Deploy the site and CRM</b>                     | Move from local development to preview and production environments.                  |
| 02 | <b>Push and verify database migrations</b>         | Confirm Supabase schema, RLS, storage, and access behavior.                          |
| 03 | <b>Finish client and vendor account management</b> | Add admin UI for linking real people to portal records.                              |
| 04 | <b>Decide payments and accounting integrations</b> | Choose Stripe, QuickBooks/Xero export, or separate accounting workflows.             |
| 05 | <b>Mobile decision</b>                             | Use responsive web first, then build native field flows only if adoption demands it. |

# Five lines to keep the meeting focused.

- 01

**Your website now feeds your CRM.**

Quote requests can enter the lead pipeline without getting lost in email.
- 
- 02

**Your clients stay inside Kiefer Built.**

The portal reinforces Kiefer's brand and process.
- 
- 03

**Your managers get the numbers they use.**

Reports emphasize margin, cash flow, retainage, changes, and vendor commitments.
- 
- 04

**Your team gets familiar navigation.**

Module names and routes reduce retraining friction.
- 
- 05

**This can grow with your company.**

Kiefer can add fields, reports, approvals, and PDFs as the process matures.
-

# Own the platform. Own the experience. Keep the workflow.

## PHASE 1

### Preview deployment

Deploy the current site/CRM, push migrations, and test real access paths.

## PHASE 2

### Live pilot

Run selected projects, clients, vendors, and quote intake through the platform.

## PHASE 3

### Production growth

Add accounting/payment/mobile integrations only where they create real value.
